### **usnetserve Solution Now Rated “Avaya Compliant”**

- *Cellular Gateway application is compatible with Avaya Aura™ and key Mobility solutions*

FOR IMMEDIATE RELEASE: 12-Oct-2009

TARRYTOWN, New York — usnetserve inc, a leading developer of cellular solutions with Teles AG, Berlin, today announced that its aGate by TELES Cellular Gateway is the first cellular gateway in North America to be compliant with Avaya Aura™ and with key telephony and mobility solutions from Avaya, a leading global provider of business communications applications, systems and services.

Enterprise communications now depend on cell phone use more than ever. Avaya Aura links the cell phone with voice infrastructure. The aGate by TELES helps in two new ways: to save money on enterprise cellular phone bills and to protect voice communications from wireline and VOIP service loss. This technology unlocks the wireless carrier's lowest rate plans for use with Avaya Aura. Customer can also depend on the wireless carrier to help failover voice calls when the wireline or VOIP service is down. The aGate is a multichannel cellular gateway, which routes calls wirelessly to and from the corporate voice switch, over one or more cellular networks. The technology is a new trunking option which augments wireline trunks. The aGate is compliant with FCC regulations and is approved for use with GSM cellular networks in North America.

“aGate offers seamless mobility with built-in ROI on Avaya Aura and Unified Communications. Customers are able to get up and running and see immediate savings in enterprise cell phone costs. aGate also offers wireless failover for voice in a wireline outage. This business continuity benefit will also grab the attention of executives. The product is fully supported by our manufacturing partner, TELES AG, a viable publicly-

traded company with years of experience selling gateways worldwide,” said Daria Biernat, Director, Communications and Training, usnetserve inc.

**usnetserve inc** is a member of the Avaya DevConnect program—an initiative to develop, market and sell innovative third-party products that interoperate with Avaya technology and extend the value of a company’s investment in its network.

As a **Gold** member of the program, **usnetserve** is eligible to submit products for compatibility testing by the Avaya Solution Interoperability and Test Lab. There a team of Avaya engineers develops a comprehensive test plan for each application to verify whether it is Avaya compliant. Doing so ensures businesses can confidently add best-in-class capabilities to their network without having to replace their existing infrastructure—speeding deployment of new applications and reducing both network complexity and implementation costs.

“By offering compliance testing to the many innovative companies like usnetserve who are members of our DevConnect program, Avaya promotes fully interoperable solutions that help businesses unleash powerful new possibilities,” said Eric Rossman, vice president, developer relations and technical alliances, Avaya. “They are able to use Unified Communications to connect employees and customers to information from wherever they are, over whatever device they have available – getting more out of their multivendor network and delivering new value to their bottom line.”

#### **About Avaya**

Avaya is a global leader in enterprise communications systems. The company provides unified communications, contact centers, and related services directly and through its channel partners to leading businesses and organizations around the world. Enterprises of all sizes depend on Avaya for state-of-the-art communications that improve efficiency, collaboration, customer service and competitiveness.
